

Abschätzung zukünftiger Naturgefahren:

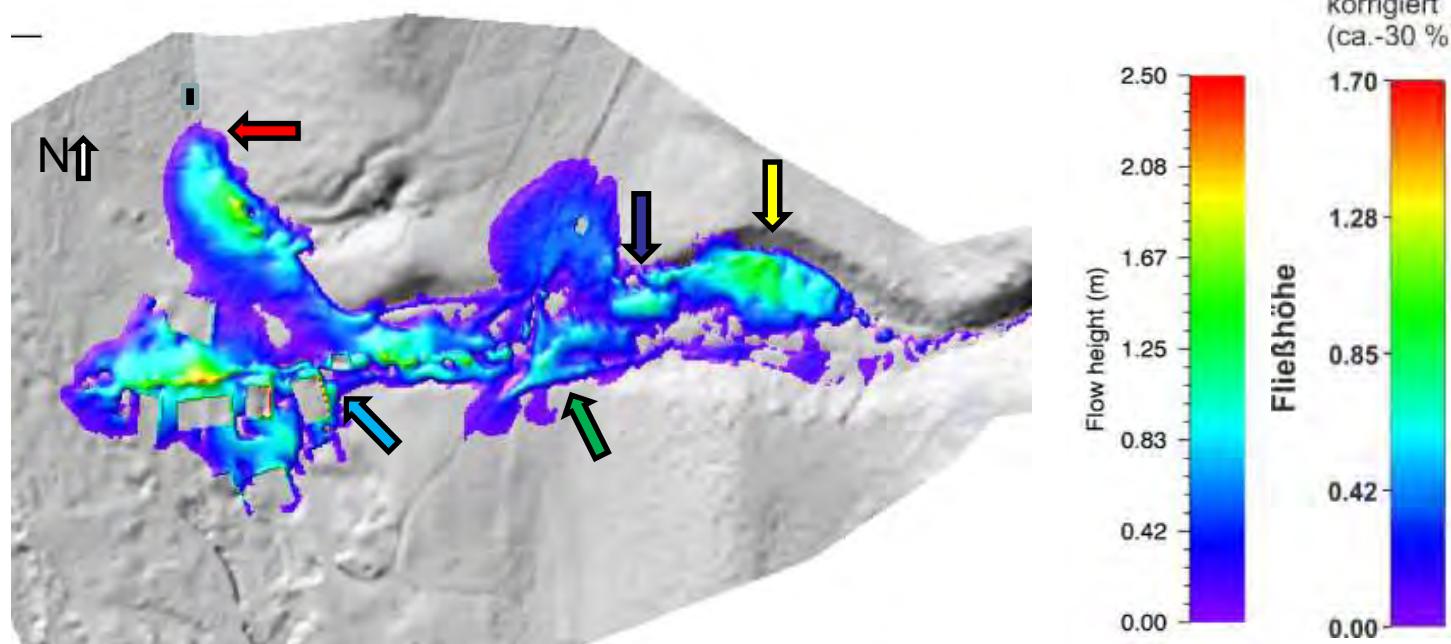

1. Degradierung Permafrost
2. Murgangaktivität
3. Steinschlagaktivität

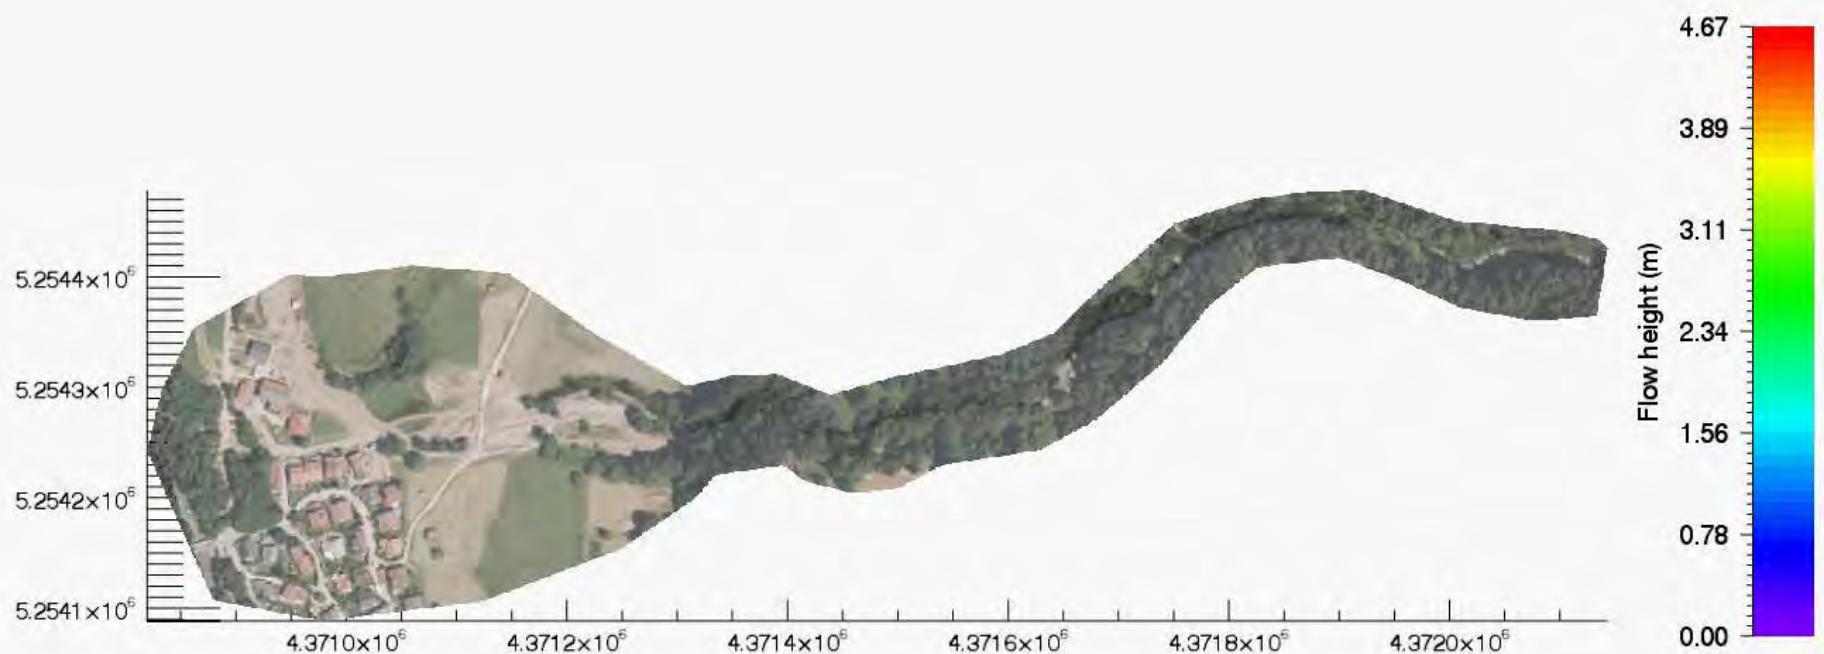

- 1 Volumenberechnung des mobilisierten Materials bei dem Murgang vom 14.06.2015
- 2 Simulation des Ereignisses vom 14.06.2015 mit RAMMS Debris Flow (= Kalibrierung)
- 3 Simulation eines möglichen zukünftigen Ereignisses unter Berücksichtigung der geplanten baulichen Schutzmaßnahmen

Ergebnis (2) – Kalibrierung - Ablagerungsmächtigkeit

Gute Übereinstimmung
von tatsächlichen und
simulierten
Ablagerungshöhen

Abschätzung zukünftiger Naturgefahren:

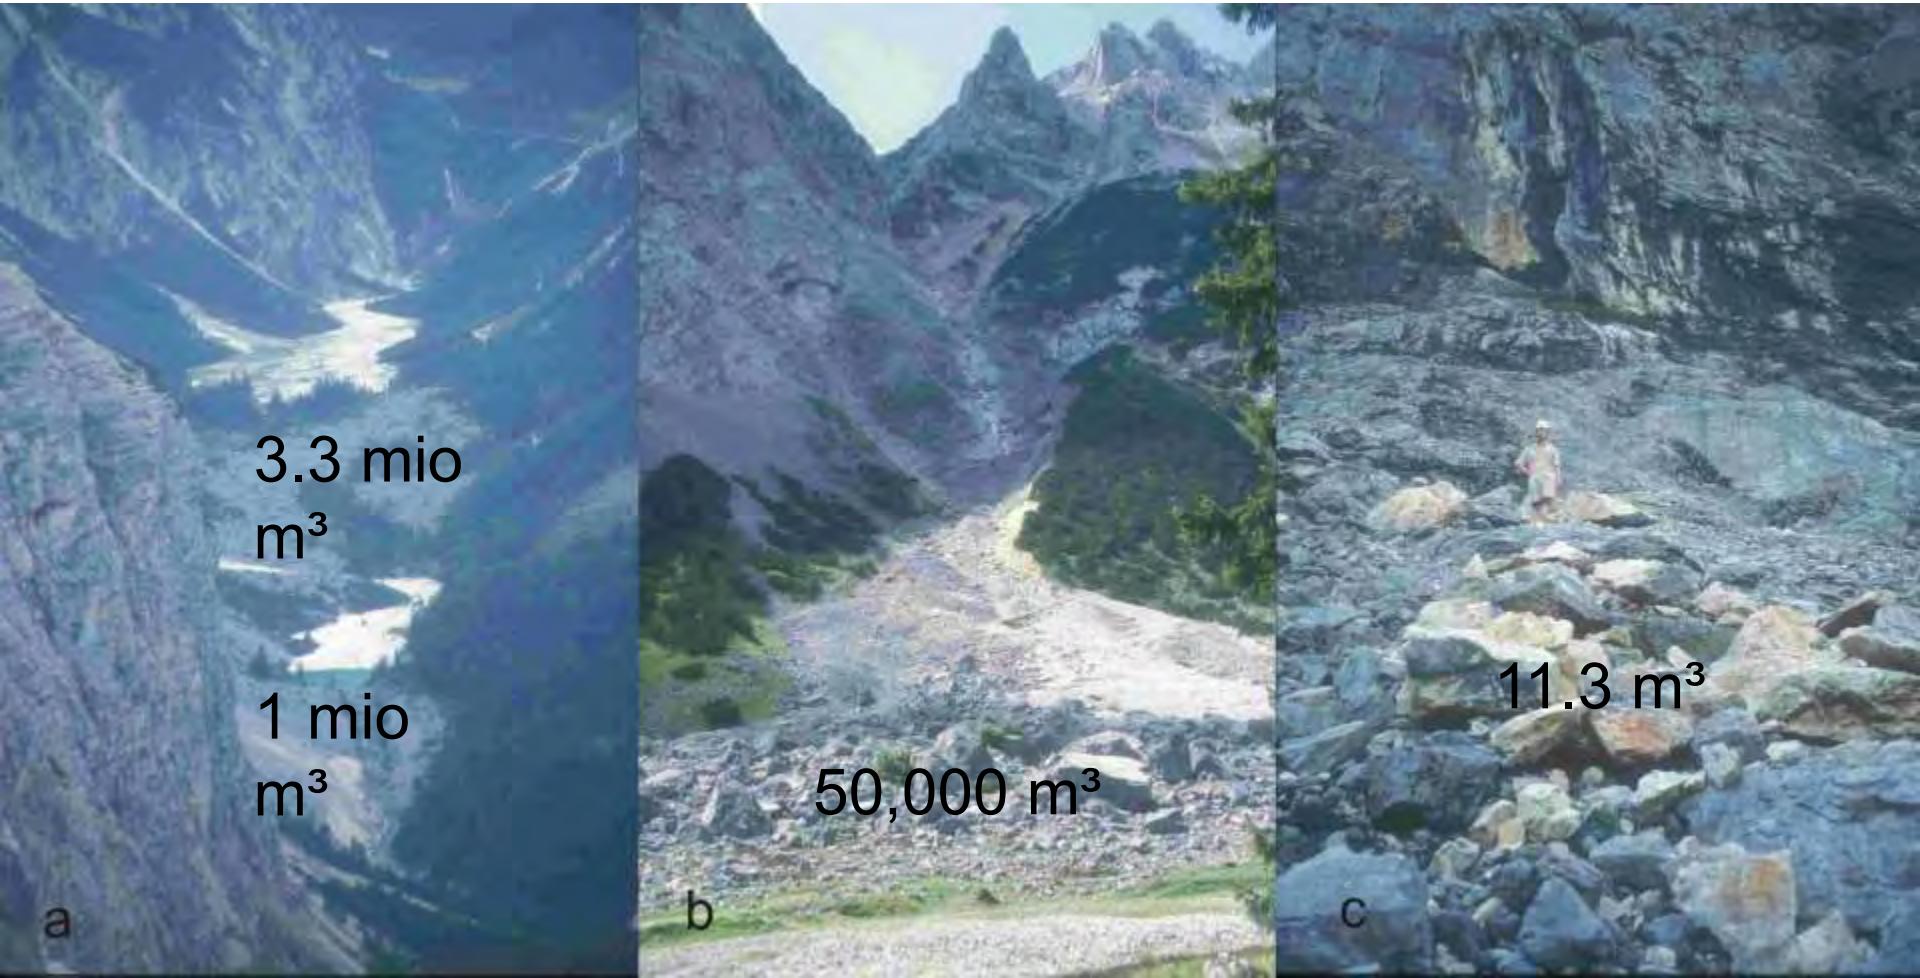

1. Degradierung Permafrost
2. Murgangaktivität
3. Steinschlagaktivität

Study site: Reintal, German Alps, 1050-2700 m a.s.l.

Mid and high-magnitude rockfalls

- Bergsturz events (> 1 mio. m^3): C14 dating and historical documents
- Cliff falls: (10,000 m^3 -1 mio. m^3) scientific record since 1920 (Leuchs, 1921)
- Block falls: (100-10,000 m^3): detailed volumetric record 1998-2003 (overall 1,500 m^3)
- Boulder falls: (10-100 m^3): detailed record 2002 and 2003

Measurement of small-scale rockfall – spatial upscaling

Measurements:

- 8 rockfall collector and 4 distance collectors
- Total 940 m²
- Measurement 2000-2003; daily to weekly measurements in 2002 und 2003
- 140 t rockfall

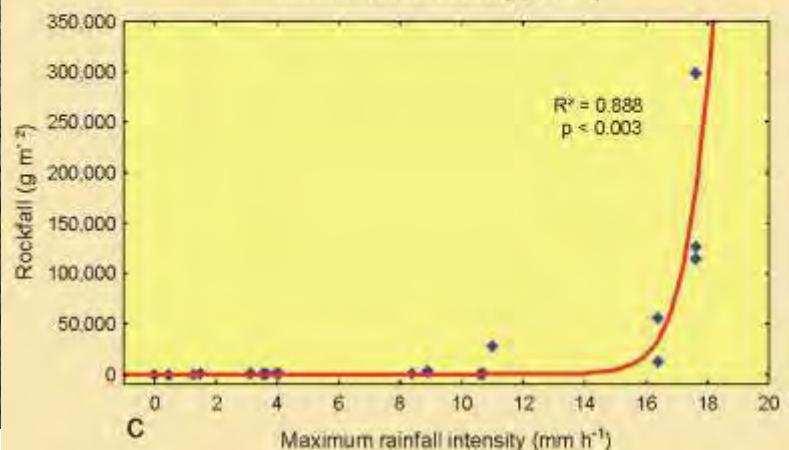

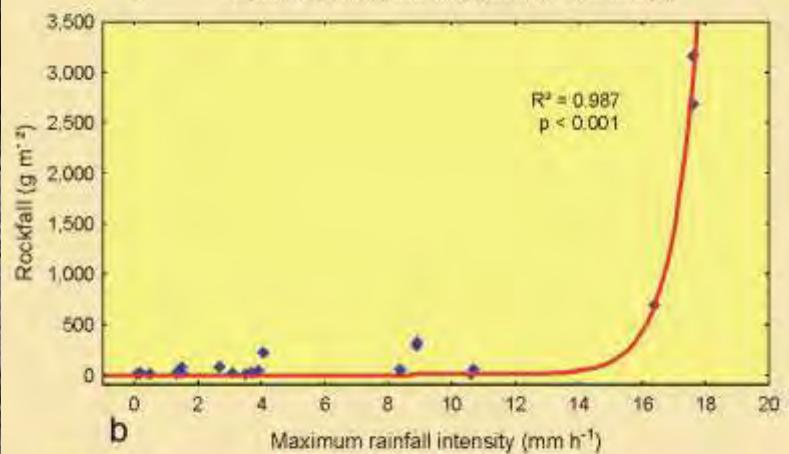

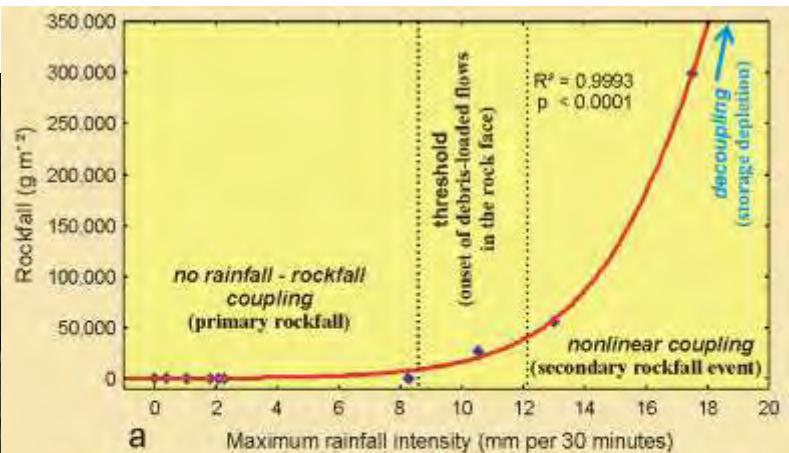

Upscaling:

- Empirical function of distal reduction of rockfall with distance from the rock face.
- Rockfall intensity function independent of collector dimensions and -position.
- Upscaling-prone rockfall function for daylighted and horizontal bedding (two rock face sections).

Krautblatter et al. 2012, Geomorphology

56 tons of rockfall in net 1a, June 14, 2003

4

Net position

other conditions (no frost action, little or no precipitation)
value of a year without a rainstorm exceeding 10 mm/30 min
ize-thaw conditions (net 4 receives direct sun radiation)
ary rockfall event" (rainstorm >13 mm/30 min)

Zusammenfassung

Permafrostdegradierung im Bereich alpiner Infrastruktur

- Geophysikalisches Monitoring ermöglicht schnelles Erkennen
- Mechanische Versuche zur Abschätzung der Wirkung
- Mechanische Fels-Eis mechanisches Modell in Entwicklung

Murganggangaktivität

- Modelle zur Abschätzung der Murgangmobilisierung und des –Impakts

Steinschlagaktivität

- Verbesserte Vorhersage über „radar nowcast“ und kinematische Versagensmodelle in Zukunft

Rockfall at the top of the mountain > Avalanches to the bottom of the gully, the falling distance is almost 1500m > punching the debris in the gully , produce excess pore water pressure> long distance travelling and air-cushion mechanism involved.
